Trends: Working Smarter than the Smarties and Tougher than the Toughies¹

Changes throughout the dairy industry continue to challenge all of us who are involved in the supply chain. It is a very kinetic environment and calls for constructive engagement to bring success!

As David Ahlem, CEO of Hilmar Cheese stated recently when speaking at a celebration of 35 years in business, "We must evolve and adapt to the changing environment."² This calls for evaluating and integrating new processes and new technologies.

It is a philosophy that is fostering many innovative approaches throughout the dairy world with pretty impressive results. Certainly, people involved in the dairy community are not strangers to hard work, but being mindful of the alternate strategies, open to innovations and aware of technology tools is increasingly important in keeping on track for a bright future!

Tips: Tech Tool that Delivers - the LactiCheck 3X Milk Composition Analyzer!

If you need to analyze a wide variety of products, the LactiCheck Model LC-3X is a compact, affordable and reliable choice! Three (3) separate channels provide real time composition results for raw milk, various drinking milks (skim milk, 1% fat, reduced fat, whole milk) and cream in just 60 seconds!

Results can be printed or automatically saved to a computer for future reporting or analysis needs. Contact us for additional details including specifications and key benefits!
